DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-30 and 34, drawn to a synchronous mirror delay system and method for improving the efficiency of the synchronous mirror delay system, classified in class 327, subclass 161.
 - II. Claims 31-33, 35-38 and 69-71, drawn to a phase detection system comprises a pair of registers and a system for using the phase detection system, classified in class 327, subclass 3.
 - III. Claims 39-68 and 72-75, drawn to delay locked loop circuit and method for improving the efficiency of the delay locked loop circuit, classified in class 327, subclass 158.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination as claimed in group I, i.e., the synchronous mirror delay system

Art Unit: 2816

as claimed in claim 18, does not required the particulars of the subcombination as claimed for patentabilibty as claimed in group II, i.e., the phase detection system as claimed in claim 31 requires a pair of registers. The subcombination has separate utility such as the phase detection system as claimed in group II can be used in a phase locked loop circuit instead of a synchronous mirror delay system in group I.

Inventions III and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination as claimed in group III, i.e., the delay locked loop system as claimed in claim 51, does not required the particulars of the subcombination as claimed for patentabilibty as claimed in group II, i.e., the phase detection system as claimed in claim 31 requires a pair of registers. The subcombination has separate utility such as the phase detection system as claimed in group II can be used in a synchronous mirror delay circuit instead of a delay locked loop circuit as claimed in group III.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. A telephone call was made to an attorney of record on 10/9/02 to request an oral election to the above restriction requirement, but did not result in an election being made.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
